ON THE ESSENCE

NIVA

PURE TECHNICAL CLASS, PURE DESIGN

The ultra-compact stylized Niva is still an edifying example to many designers and colleague manufacturers.

The epitome of functionality due to the optimal air flow and the extra-high heat emission which reaches the target temperature immediately. The epitome of design due to its honest, pure form and floating character, owing to the underlying invisible suspension and the organic, integrated towel bracket.

An icon in the radiator world where the original remains the best!

NIVA SOFT I WHITE FINE TEXTURE

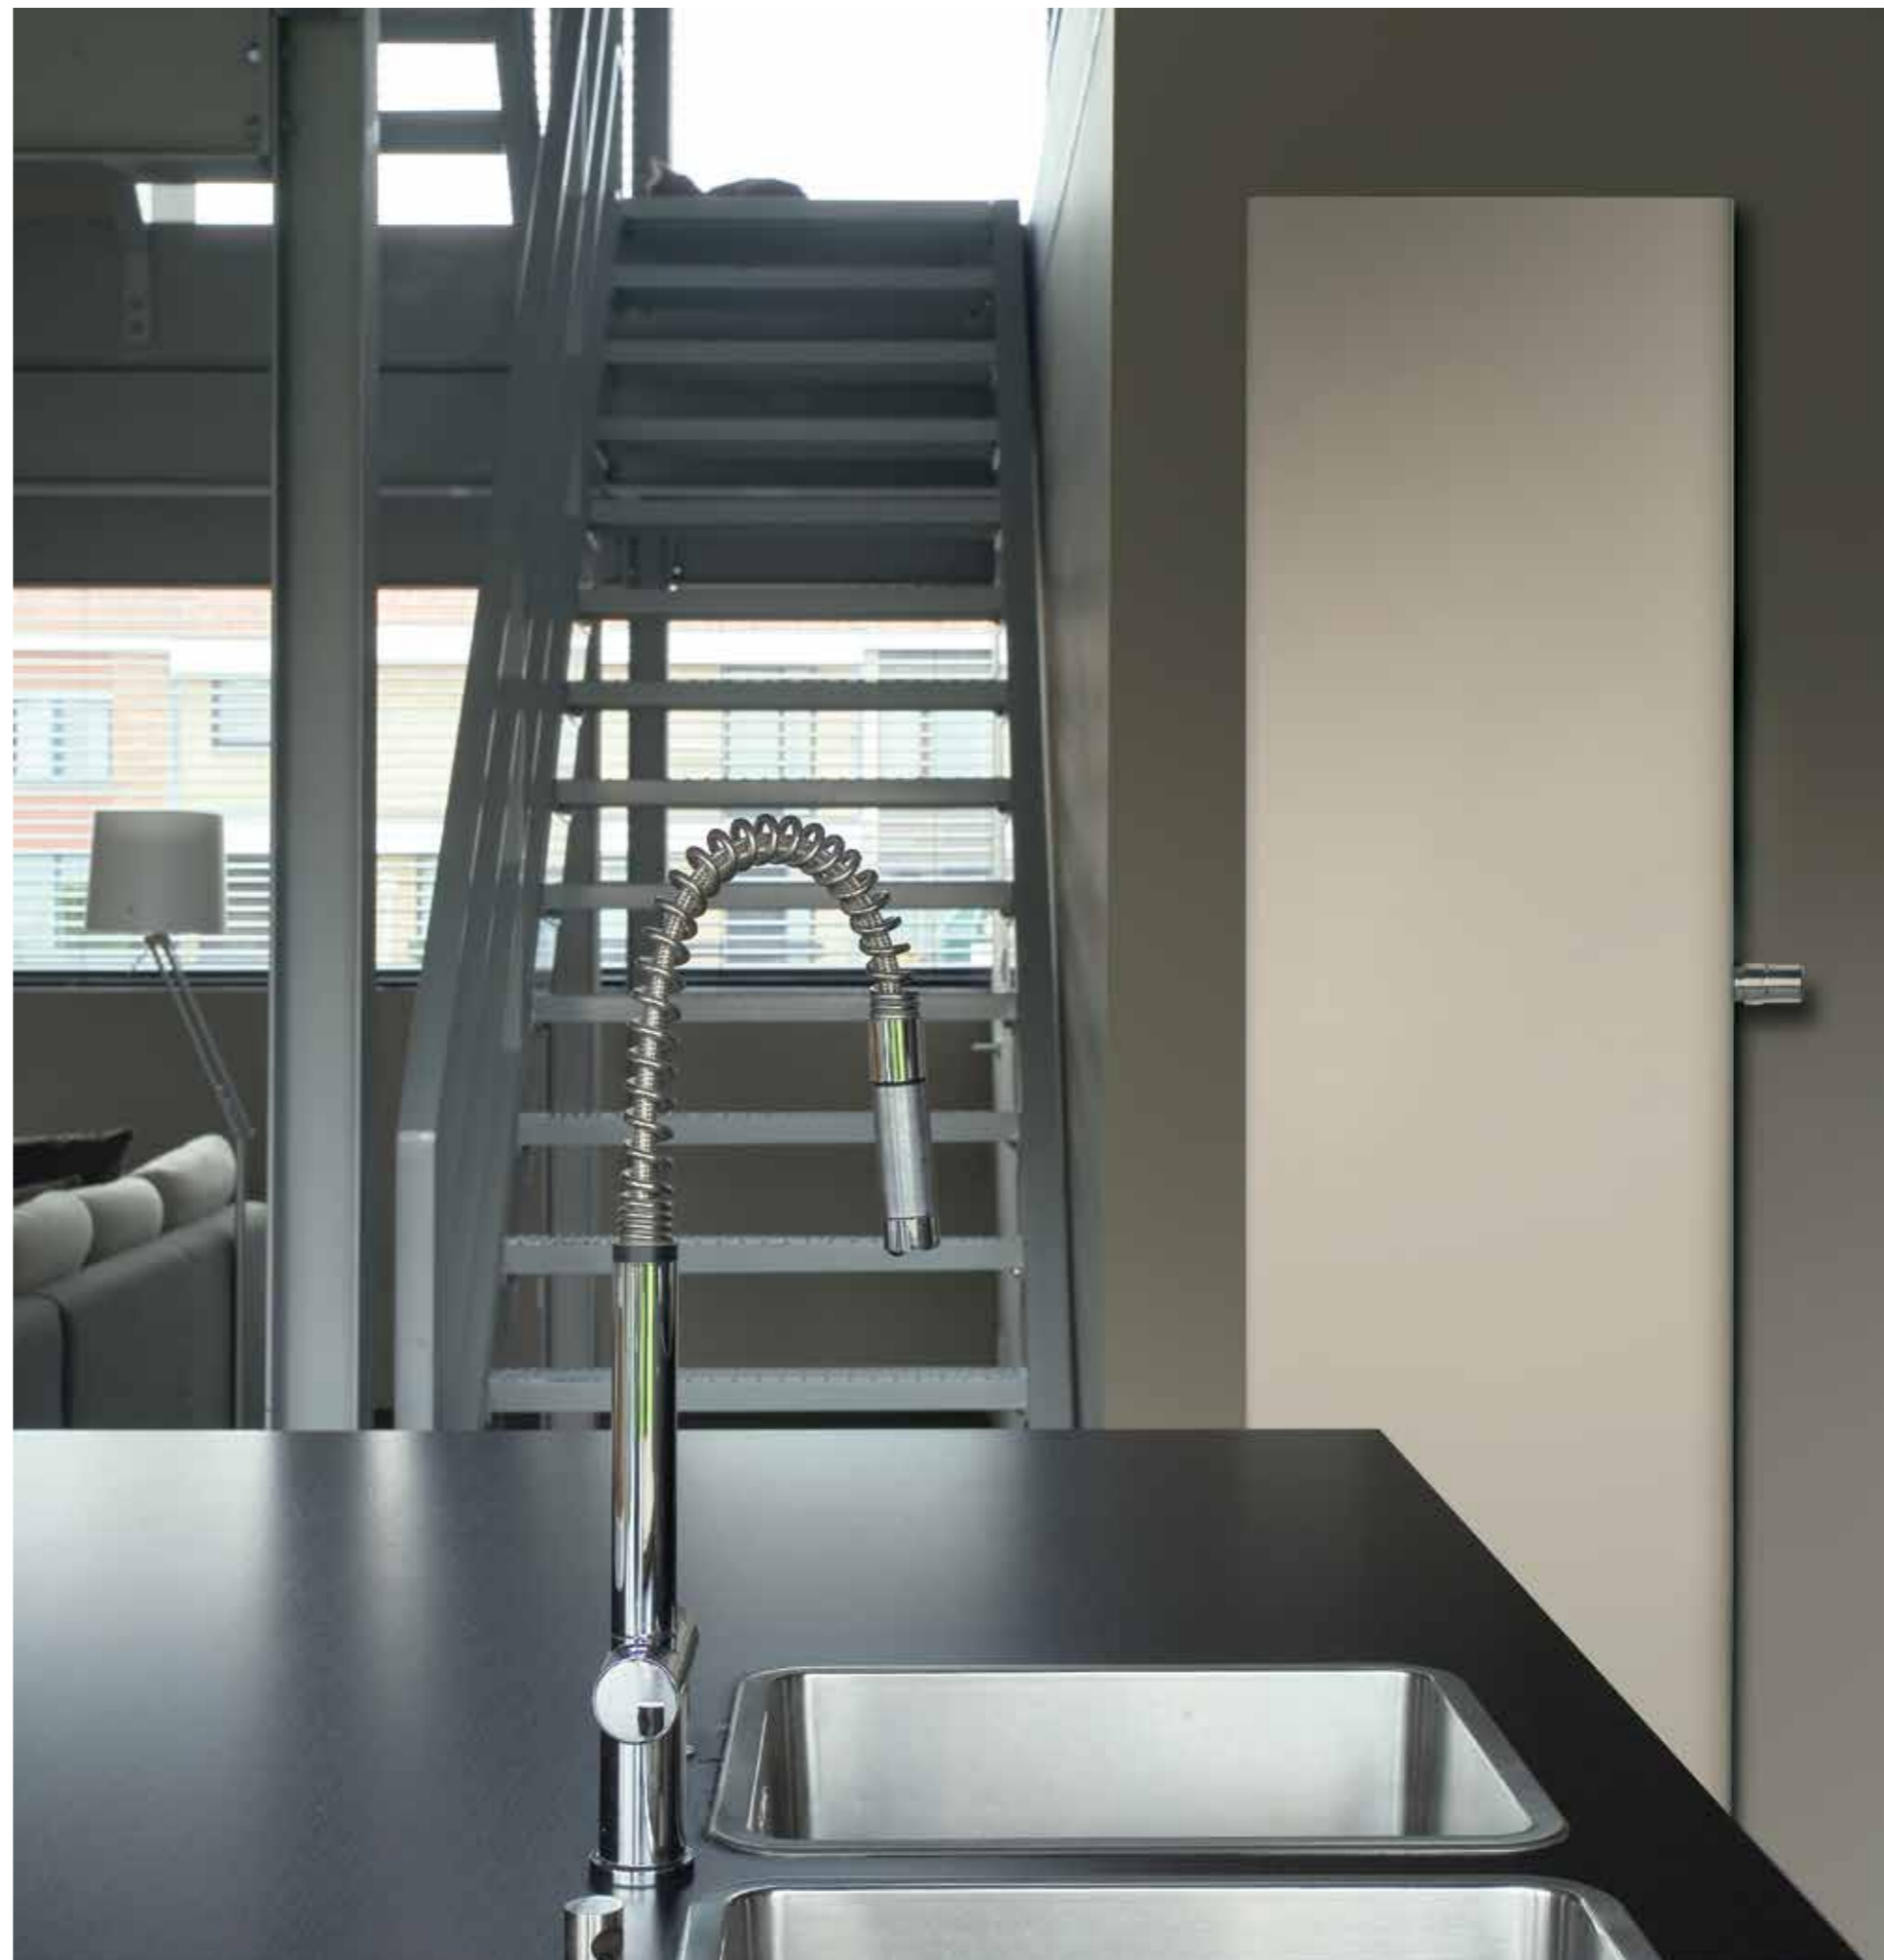

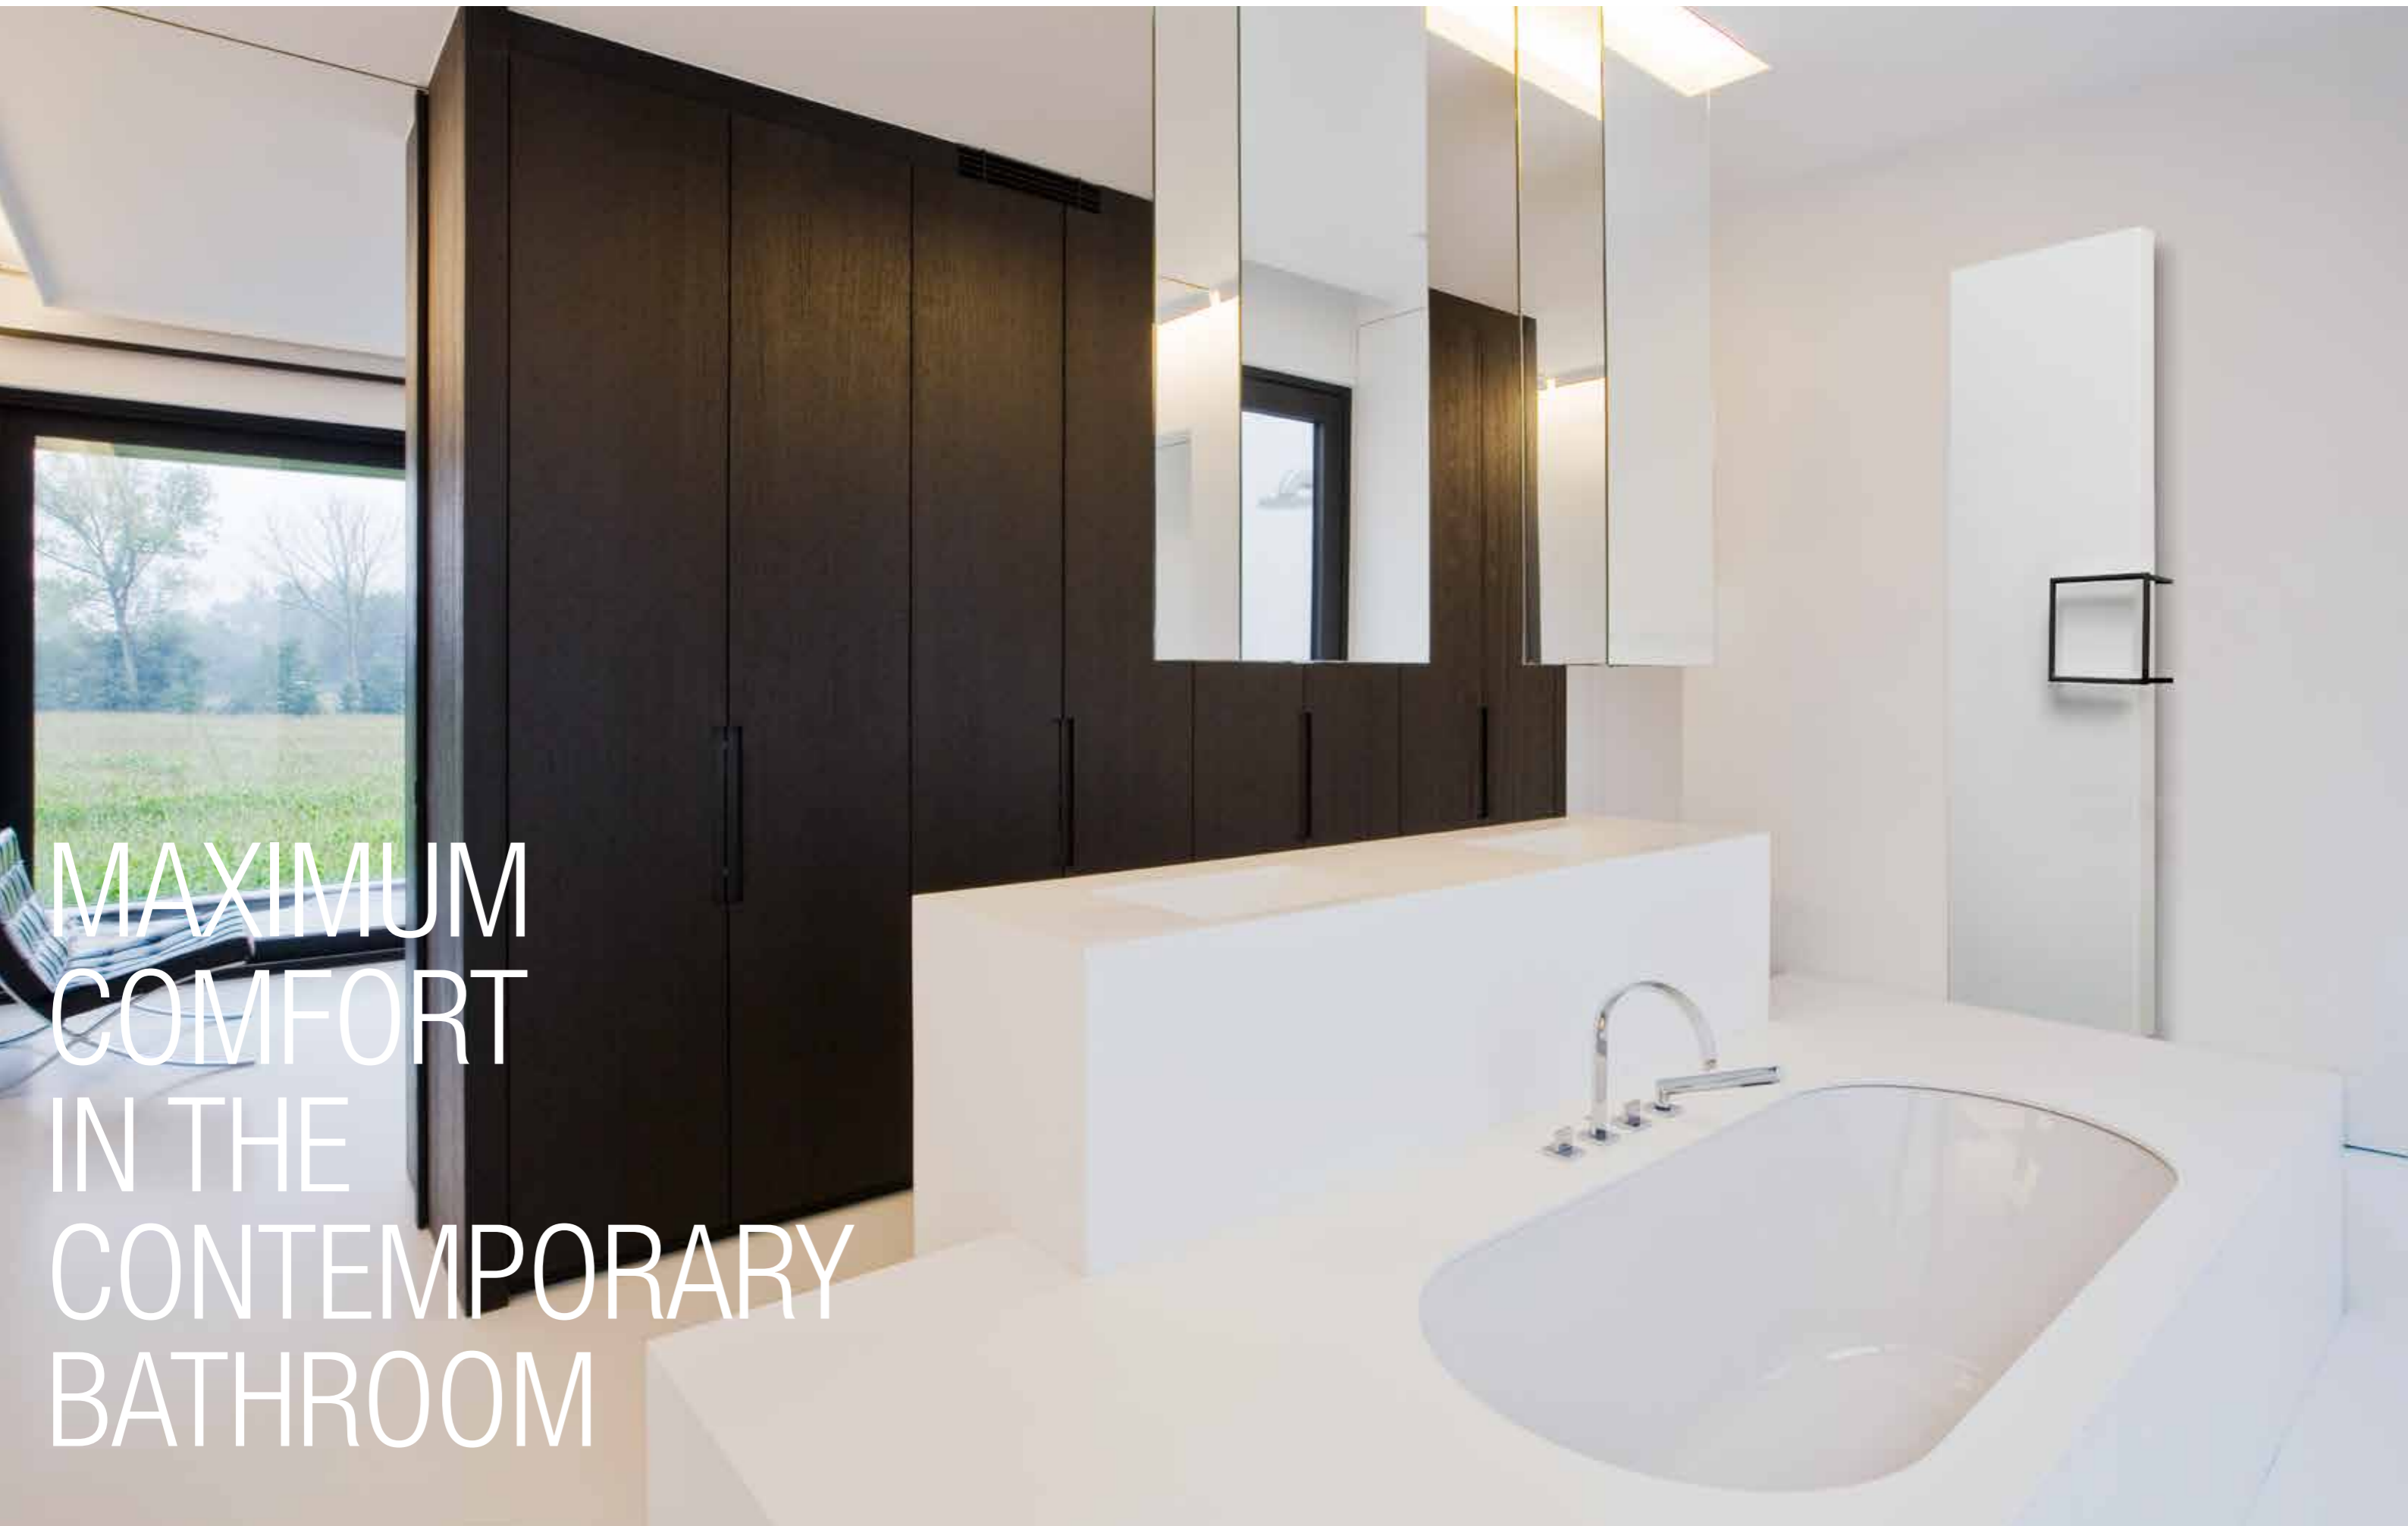

INCREASED CONVENIENCE WITH HIGHER CONTROLS

A simple idea at first sight, a thermostat at hip height. The Niva collection is the first to actually dare to do it.

The thermostat has been organically integrated into the unit, with respect for the original design and entirely in line with its pure, timeless look. Unique in our product range and unique on the market. But that's not all. The thermostat also controls an even greater heat capacity.
